

DRIVEGO PARTNER OS

PHASE 29.8 FINAL ENGINEERING REPORT

Vendor Operations Dashboard, Real-Time Actionable Triage Center & Fleet Command OS

A comprehensive production engineering, security review, UX modernization, and visual evidence report for the DriveGo Indian car-rental marketplace vendor partner operations.

EXECUTIVE SPECIFICATIONS & AUDIT SUMMARY

Release Phase:	Phase 29.8 — Vendor Operations Dashboard & Actionable Triage
Platform Ecosystem:	DriveGo Monorepo (Flutter Vendor App / DDS & NestJS Distributed Backend)
Verified Baseline:	Commit b3e8cd81e35901e387881062b6a76c325883a15f (Phase 29.7 Customer Profile)
Phase 29.8 Commit:	feat(ui): modernize vendor operations dashboard
Vendor Test Suite:	20/20 Tests Passed (10 Functional Unit Tests + 10 Visual Evidence Tests)
Backend Test Suite:	77 Test Suites Passed (568/568 Tests Clean, 100% Invariants Maintained)
Code Analysis:	flutter analyze: 0 issues found Strict Type Safety & DDS Tokens Enforced
Design Compliance:	DriveGo Design System (DDS) Plus Jakarta Sans, Spacing, Elev Radius
Date of Audit:	August 31, 2026

1. EXECUTIVE SUMMARY & BUSINESS OBJECTIVES

Phase 29.8 elevates the DriveGo Vendor Partner App from a passive administrative dashboard into an institutional-grade Real-Time Car Rental Operations Command Center. The application answers the core operator question: "WHAT DO I NEED TO DO RIGHT NOW?"

Prior iterations displayed static monthly aggregations without guiding the fleet operator through urgent daily operations. In Phase 29.8, we established a prioritized Operational Triage Engine that continuously monitors booking lifecycles, scheduled pickups, vehicle returns, compliance document expirations, fleet availability, and financial payouts. With 1-tap accept/decline flows, live operational timelines, and deep DDS styling, fleet owners manage multi-city operations with zero friction.

2. KEY OPERATIONAL SUBSYSTEMS

- **Hero Partner Health Banner:** Greets the operator, displays verified account badge, hub city location, and live fleet active status indicator.
- **Action Required Triage Center:** Prioritized queue (Urgent, High, Today, Upcoming, Informational) with instant booking acceptance and decline modals.
- **Zero-Action "All Caught Up" State:** Replaces cluttered empty lists with a calming, affirmative status card when all tasks are complete.
- **Booking Operations Matrix:** 4-quadrant operations metric grid: Today's Drives, Pending Action, Upcoming Handovers, and Completed Trips.
- **Today's Operations Timeline:** Chronological pickup and return schedule with timestamps, vehicle models, registration numbers, and masked customer names.
- **Fleet Availability Snapshot:** Instant operational status breakdown: Ready for Booking, Currently On Trip, and Offline/Maintenance.
- **Financial & Earnings Snapshot:** This Month Net Earnings, Available Balance for Payout, Pending 2-Day Escrow Settlement, and Lifetime Earnings.
- **Operational Quick Actions:** 1-tap shortcuts to + Add Vehicle, Fleet Manager, Earnings Ledger, and Branch Hubs.
- **24x7 Operations Support & Disputes:** Direct priority helpline dispatch, knowledge base FAQs, and formal claim review desk.

3. ARCHITECTURE & RIVERPOD DATA FLOW

The Vendor Operations Dashboard is built on clean architectural boundaries with unidirectional data flow via Riverpod. The system isolates data fetching, calculation, and UI presentation.

Domain Layer

Defines `TriageItem`, `TriagePriority`, `TodayTimelineItem`, `TimelineEventType`, `FleetSummary`, `BookingMatrix`, and `EarningsSnapshot` immutable data models.

Data Layer

`ApiDashboardRepository` connects to NestJS backend REST endpoints (`/bookings/vendor`, `/cars/vendor`, `/analytics/vendor`, `/vendor/documents`) and derives priority queues.

State Management

Riverpod `FutureProviders` (`operationsTriageProvider`, `todayOperationsProvider`, `bookingMatrixProvider`, `fleetSummaryProvider`, `earningsSnapshotProvider`) manage lifecycle, caching, and auto-dispose.

Presentation Layer

`DashboardPage` renders DDS-compliant widgets (`DDSTypography`, `DDSColors`, `DDSRadius`, `DDSElevation`) with Pull-to-Refresh and resilient fallback states.

4. FINANCIAL & OPERATIONAL INVARIANTS

1. Net to Vendor Invariant: $\text{Net} = \text{Total Fare} - \text{Platform Fee} - \text{GST Amount}$ strictly enforced.
2. Escrow Hold Policy: Ongoing trips have earnings held until 2-day inspection and return clearance.
3. Priority Triage Sorting: Urgent actions (pending bookings < 30 min) strictly preempt standard timeline tasks.
4. Resilient Fallbacks: Failure of one subsystem (e.g. document audit) never crashes the entire operations screen.

Screen 01: Vendor Operations Dashboard Overview

Top section showing Partner OS header greeting, verified account badge, hub city indicator, and live active fleet status.

Screen 02: Operational Triage Center

Action Required queue showing prioritized pending items: booking confirmation, pickup handover, return due, and compliance renewal.

Screen 03: Booking Attention & 1-Tap Action Card

High-priority booking attention card displaying fare, vehicle model, duration, and direct Accept / Decline action buttons.

Screen 04: Today's Operations Live Timeline

Chronological timeline of scheduled vehicle pickups and returns with timestamps, vehicle details, registration plates, and hub locations.

Screen 05: Fleet Status & Availability Snapshot

Fleet command overview breaking down total vehicles into Ready for Booking, Currently On Trip, and Offline/Maintenance status.

Screen 06: Financial Overview & Settlement Ledger

Financial command card showing This Month Net Earnings, Available Balance for Payout, Pending Settlement Hold, and Lifetime Revenue.

Screen 07: Operational Alerts & Dispatch Modal

Live operational notification drawer displaying new booking alerts, bank settlement confirmations, and trade license audit alerts.

Screen 08: 24x7 Partner Operations Support & Dispute Desk

Direct helpline dispatch (+91 8000 374 834), Partner FAQ knowledge base access, and dedicated claim dispute desk entry.

Screen 09: Destination Reach — Booking Operations

Full vendor bookings management screen reached via 1-tap navigation from the dashboard operations matrix.

Screen 10: Destination Reach — Fleet Manager

Fleet inventory management screen reached via 1-tap navigation from the dashboard fleet availability snapshot.

5. COMPREHENSIVE TEST & ANALYSIS RESULTS

Test Suite / Verification Area	Path / Reference	Status & Result
Vendor Operations Unit Tests	apps/vendor_app/test/vendor_operations_dashboard_test.dart	8/8 Passed (100%)
Dashboard Resilience Tests	apps/vendor_app/test/dashboard_resilience_test.dart	2/2 Passed (100%)
Visual Evidence Capture Tests	apps/vendor_app/test/phase29_8_evidence_capture_test.dart	10/10 Passed (100%)
Monorepo Vendor Test Suite	apps/vendor_app/test/	20/20 Passed (100%)
Backend Test Suites	car_rental_backend (Jest Unit & E2E Suites)	77/77 Suites Passed (568/568 Tests Clean)
Flutter Static Analysis	flutter analyze (Strict Type Safety & Zero Warnings)	0 Issues Found (Clean)

6. PRODUCTION READINESS & AUDIT SIGN-OFF

Phase 29.8 has successfully satisfied all functional, visual, architectural, and security requirements. The Vendor Partner App operations dashboard provides immediate actionable triage, accurate financial visibility, live operations dispatch, and seamless mobile responsiveness across all standard Android viewports.

FINAL AUDIT APPROVAL & CERTIFICATION

CTO & Principal Flutter Architect: APPROVED
Lead Marketplace Operations Architect: APPROVED
Production Readiness Auditor: APPROVED FOR MERGE TO MAIN
