

DRIVEGO PARTNER OS

PHASE 29.11: VENDOR LOCATION & DELIVERY OPERATIONS ENGINE

Multi-Location Fleet Logistics • Public Points • Doorstep Delivery • One-Way Relocation Matrix

1. EXECUTIVE SUMMARY

Phase 29.11 establishes the comprehensive Vendor Pickup, Drop-off, Delivery, and Location Operations Engine for DriveGo. Vendors are no longer restricted to a single pickup yard; they can configure multiple branches, transport hubs (airports, railway stations), public meeting points, and customer-address doorstep delivery zones with location-specific pricing, vehicle availability, operating hours, and one-way relocation matrices. All existing fleet management (Phase 29.8/29.9) and handover/return inspection protocols (Phase 29.10) remain 100% intact and fully integrated.

Key Capabilities Implemented

- 5 Operational Handover Modes: At My Location, Multiple Locations, Public Points, Doorstep Delivery, Combination
- 6 Location Types: Vendor Yard, Branch Hub, Airport Terminal, Railway Station, Public Meeting Point, Commercial Office
- 8-Step Add Location Wizard: Type -> Details -> Map Pin -> Hours -> Capabilities -> Pricing -> Fleet Assignment -> Review
- Real-time Doorstep Delivery Calculation: Free delivery radius, per-km surcharge, maximum radius, and expedited delivery fees
- Inter-Branch One-Way Matrix: Configurable pickup-dropoff location pairs with custom relocation fee management
- Full Offline Resilience: Local storage caching of location configs with network recovery sync and clear vendor alerts.

2. CORE VERIFICATION SIGN-OFF TABLE

Component / Dimension	Requirement	Achieved Status	Pass Rate
Backend REST API	Guarded CRUD, Quotes, Matrix	VERIFIED (Render Backend)	100% PASS
Shared Models (packages/models)	Full DTO & Domain Serialization	VERIFIED (Zero Discrepancies)	100% PASS
Flutter Vendor App (Riverpod)	8-Step Wizard + Location Hub	VERIFIED (Clean Architecture)	100% PASS
AVD Native Screenshots	17 Unique Operational States	CAPTURED (emulator_5554)	17/17 PASS
Automated Dart Tests	Min 33 Location Ops Tests	33 Unit & Widget Tests	33/33 PASS
Full Vendor App Test Suite	Zero Regressions Across Suite	99 Comprehensive Tests	99/99 PASS
OTP / PII Redaction Audit	Zero OTP/Token Leakage	OBFUSCATED (•••••)	100% PASS

3. MULTI-LOCATION DELIVERY & RELOCATION MATRIX ARCHITECTURE

The location architecture bridges vendor branch operations with customer booking discovery and checkout quotes. Locations are modeled with distinct operational capabilities (allowsPickup, allowsReturn, allowsDelivery), operating hours (including 24x7), assigned vehicles, and pricing surcharges.

Backend Architecture (car_rental_backend)

- DTOs (src/locations/dto/vendor-location-operations.dto.ts): CreateVendorLocationDto, UpdateVendorLocationDto, VendorDeliveryPolicyDto, LocationMatrixUpdateDto, DeliveryQuoteRequestDto.
- Controller (src/locations/locations.controller.ts): Guarded endpoints (/locations/vendors/me/locations, /policy, /matrix, /quote, /summary, /public/catalog).
- Service (src/locations/locations.service.ts): Dynamic delivery fee math, inter-location matrix calculations, public catalog search by city/lat/lng, and location validation rules.
- Automated Suite (src/locations/locations-vendor-operations.spec.ts): 10 dedicated Jest tests passing with 100% branch and

4. BACKEND REST ENDPOINTS MATRIX

HTTP Method	Endpoint Route	Auth / Role	Functionality
GET	/locations/vendors/me/locations	JWT (VENDOR)	Fetch all vendor locations & assigned cars
POST	/locations/vendors/me/locations	JWT (VENDOR)	Create new vendor branch / airport point
PUT	/locations/vendors/me/locations/:id	JWT (VENDOR)	Update location details, hours, fees
DELETE	/locations/vendors/me/locations/:id	JWT (VENDOR)	Deactivate or soft-delete vendor location
GET / PUT	/locations/vendors/me/policy	JWT (VENDOR)	Get/Update doorstep delivery policy
GET / PUT	/locations/vendors/me/matrix	JWT (VENDOR)	Get/Update one-way inter-branch matrix
POST	/locations/quote	PUBLIC	Calculate dynamic delivery & one-way fee quote
GET	/locations/public/catalog	PUBLIC	Catalog discovery for customer booking search

5. FLUTTER VENDOR APP DOMAIN & PRESENTATION LAYERS

The Flutter frontend (apps/vendor_app) implements an intuitive, card-based management hub for location settings alongside a step-by-step guided wizard for adding new branch hubs, transport points, and public handover zones.

Flutter Component Architecture

- Domain Models: VendorLocation, VendorDeliveryPolicy, LocationMatrixItem, LocationOperationsSummary with complete JSON serialization.
- Riverpod Providers: vendorLocationsProvider, vendorDeliveryPolicyProvider, locationMatrixProvider, locationOperationsSummaryProvider.
- Location Settings Page: Mode selector, active location cards, delivery policy summary, and one-way matrix visualizer.
- 8-Step Add Location Wizard: Type selection, address form, interactive coordinates pin, hours picker, capabilities toggles, fee

6. AUTOMATED TEST SUITE (33 TEST CASES)

Test Suite Area	Test Cases Count	Assertion Scope	Status
Domain Model Serialization	6 Tests	VendorLocation, Policy, MatrixItem JSON roundtrip	PASS (100%)
Delivery Fee Calculation Engine	4 Tests	Free radius, per-km rates, max distance enforcement	PASS (100%)
One-Way Matrix Logic	3 Tests	Inter-branch pairs, custom fees, disable flags	PASS (100%)
Riverpod State Providers	5 Tests	AsyncValue handling, loading, error, success states	PASS (100%)
Location Settings Page UI	5 Tests	Mode selector, location cards, add button, toggles	PASS (100%)
8-Step Location Wizard UI	6 Tests	Step navigation, validations, fleet car pickers	PASS (100%)
Booking Detail Handover Integration	4 Tests	Pickup/return location cards & OTP flow readiness	PASS (100%)

7. ANDROID AVD EVIDENCE (SCREENS 01 – 08)

Captured on Android AVD emulator-5554 (Android 16 / API 36, 1080x2424, 420 dpi) with Impeller rendering backend.

01. Location Settings Hub

Main settings overview with operating mode card and configured yards.

02. Operating Mode Selector

5 handover modes: Yard, Multi-Location, Public, Delivery, Combination.

03. Location List Cards

Active location cards showing badges, address, and assigned cars.

04. Delivery Radius & Pricing

Doorstep delivery policy: 5km free, ₹15/km, 25km max radius.

05. One-Way Matrix

Inter-branch relocation pairs (Hyderabad Yard <-> Airport Terminal: ₹200).

06. Wizard Step 1: Type

6 location categories: Yard, Hub, Airport, Station, Meeting Point, Office.

07. Wizard Step 2: Details

Location display name, street address, locality, city, state, pincode, phone.

08. Wizard Step 3: Map Pin

GPS latitude and longitude coordinate verification and mapping.

8. ANDROID AVD EVIDENCE (SCREENS 09 – 17)

Continuation of native emulator evidence covering capability setup, fleet assignment, detail view, handover integration, empty states, and offline resilience.

09. Wizard Step 4: Hours

Operating hours (08:00 - 22:00) and 24x7 service toggle.

10. Wizard Step 5: Capabilities

Service capabilities: Pickup enabled, Return enabled, Delivery enabled.

11. Wizard Step 6: Pricing

Surcharges setup: Pickup fee ₹0, Return fee ₹0, One-way fee ₹200.

12. Wizard Step 7: Assignment

Selective vehicle fleet assignment to the new branch location.

13. Wizard Step 8: Review

Comprehensive configuration review before live location activation.

14. Location Detail View

Branch operational dashboard with stats, hours, fees, and fleet list.

15. Handover Booking Cards

Booking details with pickup/return location cards and OTP flow.

16. Zero-Locations State

Empty state illustration with prominent "Add First Location" CTA.

9. SECURITY & REDACTION COMPLIANCE AUDIT

In strict adherence to the DriveGo Security & PII Protection Guidelines, all sensitive authentication tokens, SMS OTP values, and payment keys are strictly redacted across all UI renders, logs, screenshots, and PDF reports.

Redaction Protocol Verification

- Customer Handover OTP Fields: Always masked as ••••• or "Enter OTP provided by customer" placeholder.
- Vendor Authentication Tokens: Stored in SecureStorage, excluded from logs, masked in debug outputs.
- Location GPS Coordinates: Sanitized to standard precision, avoiding exact vendor personal residence exposure.
- Phone Numbers: Sanitized and masked for test accounts (+91 98765 43213).

10. PHASE BOUNDARIES & ARCHITECTURE LOCK

Architectural Lock & Scope Discipline

- Phase 29.8 (Fleet Management & Dynamic Pricing): 100% PRESERVED & UNMODIFIED.
- Phase 29.9 (Fleet Analytics & Earnings Engine): 100% PRESERVED & UNMODIFIED.
- Phase 29.10 (Handover & Return Inspection Protocols): 100% PRESERVED & INTEGRATED.
- Phase 29.11 (Vendor Location & Delivery Operations Engine): COMPLETE, VERIFIED & LOCKED.
- Phase 29.12: NOT STARTED (Strictly deferred until next phase authorization).

PHASE 29.11 VERIFICATION SIGN-OFF: 100% PASSED AND PRODUCTION READY
